

“I’ve got it! My game will be called *Space Dogs: Robots Attack*,” Raven declares.

Raven glances at her watch. It is 5:15 p.m. She has 15 minutes until she has to eat dinner. Raven decides to make a plan. This will help her set aside the time she needs to create her game.

Raven looks at her calendar. She wants to spend time on Friday working on her game. She knows she won't have homework that day. Raven gets home from school at 3:15 p.m. But she has a piano lesson at 3:45. Her lesson lasts for 30 minutes. Then, she has family movie night. It starts at 5:00 p.m.

"I hope I can find some time before the movie starts!" Raven says to herself.

Work It Out

Help Raven find the time! How long can she spend working on her video game?

Hint: Use the clocks to help you. Find out how much time Raven has before and after her piano lesson. Then, add them together to find out the total amount of time.
